

12.1” LCD DISPLAY INSTALLATION INSTRUCTIONS.

ELE-0190-ITS

This 12.1 LCD Display replaces ALL Fadal CNC88 OR CNC88HS Pendant’s with the original tube monitor or any other LCD type display that may be installed. The kit comes with a display, bezel, remote control, batteries and hardware.

(Note: You need at least to 1420-2 Video Card in Slot 7 of the Card Cage for it to operate correctly.)

- **CNC88 Mounting** – Mount the Display with the Bezel through the front and attach the 4 black screws and nuts. After it is mounted plug in the BNC Connector and the AC Power Plug.
- **CNC88HS Mounting** – Mount the display from the back and the Bezel from the front and attach the 4 black screws and bolts. After it is mounted plug in the BNC Connector and the AC Power Plug.
- **Remote Control** – If the Video does not come one after powering up, then press the button on the bottom left of the Remote labeled **BNCTV**. Make sure when using the Remote Control that you point it in the back of the Pendant with the door open.
- **Brightness & Contrast** – Press the Menu Button on the Remote Control and then Press Enter on the first selection named Picture Mode. Page down to desired setting and use the left and right arrows to adjust accordingly. Press the Exit button on the Remote to finish. Also, adjustments can be made using the button panel on the LCD Display.
- **Factory Menu** – To change the Vertical and Horizontal Settings you must go into the “Factory Menu” to make any changes. Press Menu and then 1973 to enter the Factory Menu.
- **Vertical and Horizontal Adjustment** – After entering the Factory Menu press the Down Arrow, nine times until you get to OVERSCAN and press the Right Arrow to select it. Next press the Up and Down Arrow to the setting you want and use the Left and Right Arrows to make changes to that setting. It is best to display a full screen of characters when adjusting, so we usually just go to SETP on the Control so the whole Display is showing characters. Press the Exit button on the remote.
